Overview of Microsoft Office 365 from myhosting

Featuring the newest cloud technologies, [Microsoft Office 365 from myhosting](#) empowers organizations large and small to bolster their productivity and efficiency in terms of speed, compatibility, and costs. In addition to upgrading familiar tools such as Microsoft Word, Excel, PowerPoint, Outlook, and OneNote, Office 365 offers its customers with cloud-based collaboration and communication services through Exchange Online, SharePoint Online, Skype For Business, and Office Professional Plus. This user-friendly and all-inclusive package enables companies to focus more on its core business and less on technical infrastructure, which myhosting handles on your behalf.

Total Costs of Ownership

Not only does Office 365 from myhosting include familiar applications and programs, it also features online office collaboration software for email, document sharing, and web conferencing. Office 365 surpasses other file-sharing programs such as Google Docs and Dropbox because it combines familiar and new tools in one comprehensive package to save companies from paying for each program or module. By incorporating these various tools into one web-based platform, Office 365 enables companies to easily standardize itself with the latest software packages, which myhosting updates automatically on the customers' behalf. This means less upfront capital outlay and lower total costs of ownership, which is critical for businesses going forward.

Collaboration & Real-Time Communication

Through Skype for Business, Exchange Online, and SharePoint Online, Office 365 from myhosting promotes communication and collaboration among employees. For example, SharePoint Online allows users to share and track different versions of documents. By authorizing only one user to work on each document, SharePoint Online minimizes the risk of users overwriting each other's work, which often occurs in other file-sharing solutions. For other occasions where real-time interactions are needed, team members leverage Skype for Business and its unified communication capabilities (instantly message, online voice and video chats) to hold online meetings and to review

documents. Needless to say, fewer meetings mean less time out of office and traveling costs.

Accessibility

Office 365, although some may argue, is the most accessible, multifunctional platform, especially for employees of various technical backgrounds. Building upon employees' familiarity with Microsoft Word, Excel, PowerPoint, and Outlook, Office 365 allows them to use these tools within a web browser and authenticate with their existing credentials in Active Directory. In addition, Office 365 works equally well in Windows or Mac. This level of accessibility increases productivity, as employees bypass the tribulations of setup and instead focus on their core competencies and productivity.

Customer Support

Highly acknowledged for its outstanding customer service, myhosting offers phone, email and live chat support 24 hours a day, 7 days a week. When users encounter technical issues, they can seek help from a real customer representative instead of trying to navigate Microsoft's customer support setup. This includes determining the number of licenses required, email and contact migration and all future software updates. Time should not be spent dealing with the management of software. Instead, using the enterprise-powered functionality to increase productivity and grow business.

Flexibility & Scalability

All in all, Office 365 from myhosting significantly reduces IT costs and administration. Subscribers can choose from a number of plans depending on what suits them best. If you simply need the basics, Business Essentials has you covered. If you need a complete turn-key solution, Business Premium offers every feature available. With Office 365 from myhosting, clients can immediately set up new offices, departments, or business units to accommodate the dynamic growth of the company.

Access Anywhere

Lastly, Office 365's cloud-based software permit clients to access work files and documents via Internet access so they can be productive anywhere. This enables employees to create more flexible work schedules and to do business on the go. Without having real-time access to secure company files, employees will experience difficulties with working outside the office.
